PROJECTS

Postal Service System

- Developed a platform for package tracking, inventory management and delivery transparency.
- Businesses create and manage packages while couriers handle delivery; includes real-time status updates and bulk package management.
- Added reporting for delivery times and performance metrics, plus customer delivery notifications.

Chick's Run — React, Spring Boot, PostgreSQL

- Designed and built a lane-crossing multiplier game with a React front end and Spring Boot back end.
- Implemented MetaMask wallet integration for Web3 transactions.
- Built game session persistence in PostgreSQL so players can reconnect and resume progress.

EDUCATION

Game Design and Development (BSc studies, 2 years completed) — Estonian Entrepreneurship University of Applied Sciences (EUAS), Tallinn, Estonia
